# Which Method makes the Prettiest Time Plots

Mahalia Clark

Time Plots

We wanted to make some prettier time plots to better visualize the data. I tried three methods: basic built in plot function, timePlot function from openair package, and ggplot.
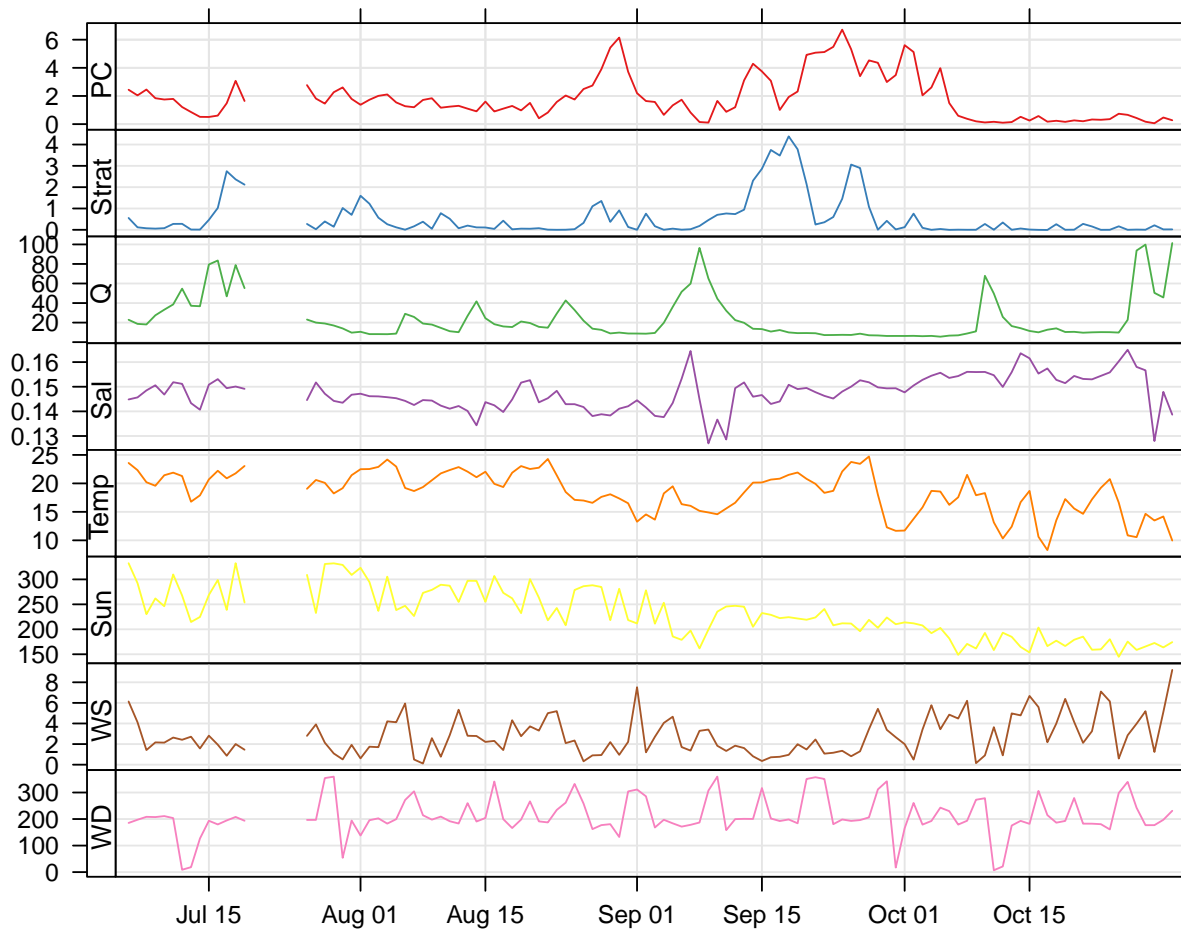

First we can try with the basic plot function

The graphs are a little short vertically. How can I get rid of all the space in between without losing my bottom x axis?
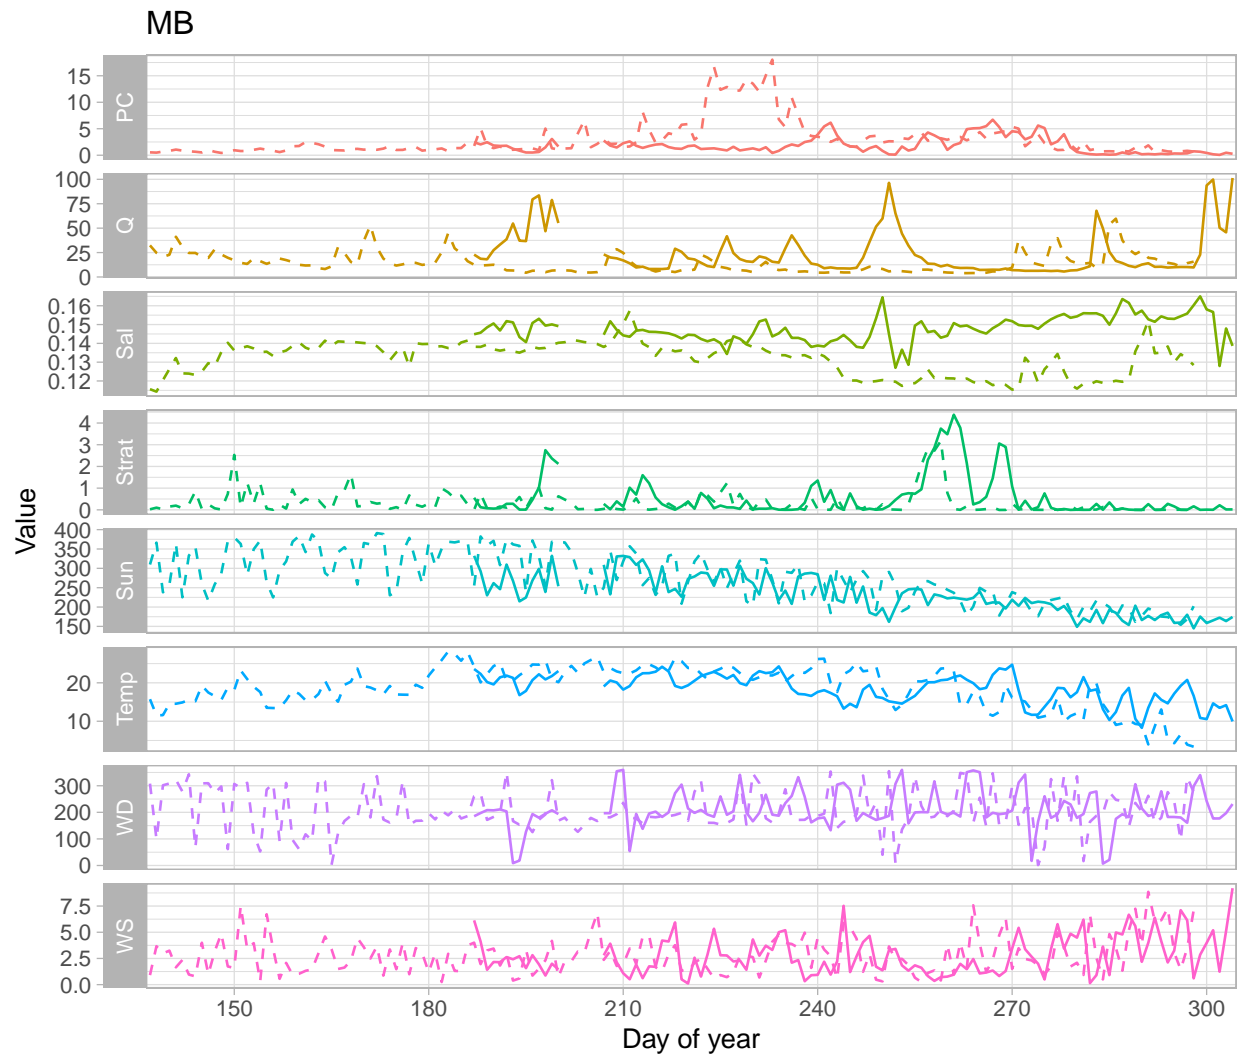

Next, we can try using the package Wilton suggested: openair.

MB17

This is pretty good. I just feel like the y axes look messy.

Finally, we can try using ggplot.

It's beautiful!
